

OZON-Lyze: Tech Stack

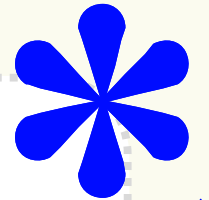

Median price by process or brand

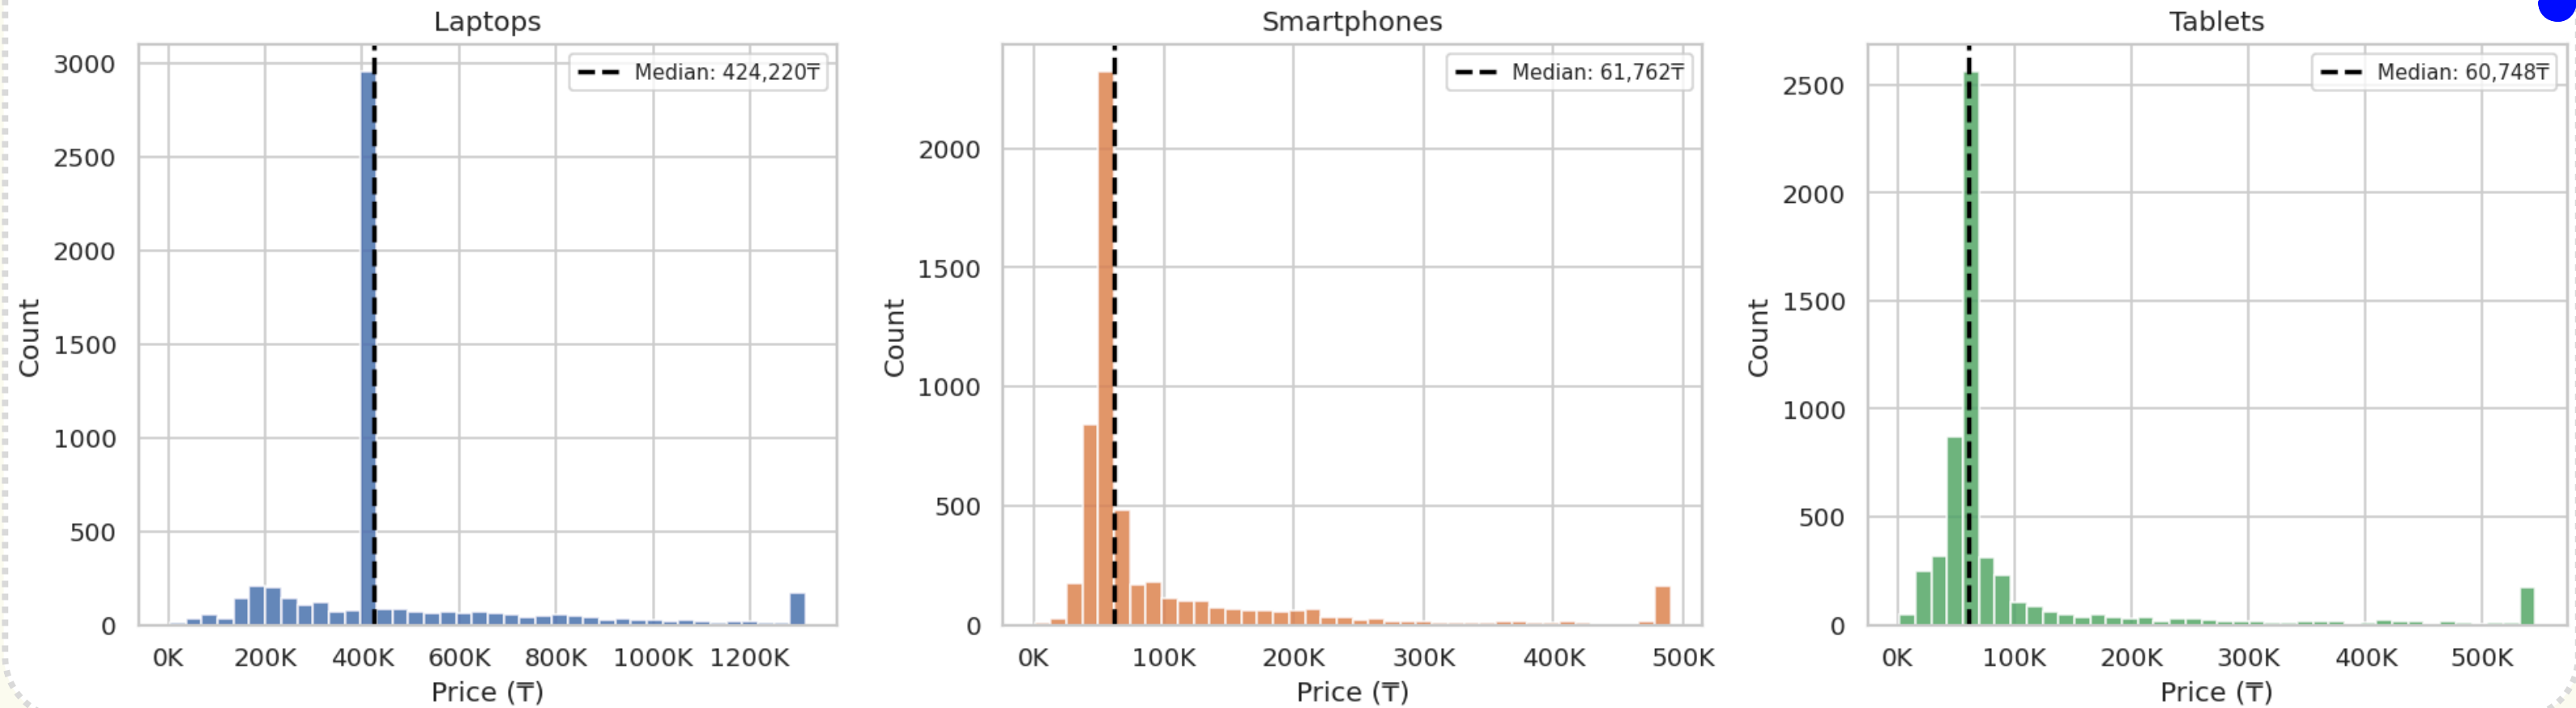

- The Luxury Leaders: Apple and Kirin are the "bosses" of the expensive segment. They focus on people who want the best and are ready to pay a high price.
- The People's Choice: Brands like Intel and Qualcomm are the standard for everyone else. They offer good quality at a price that most people can afford.

Price distribution by category

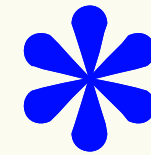

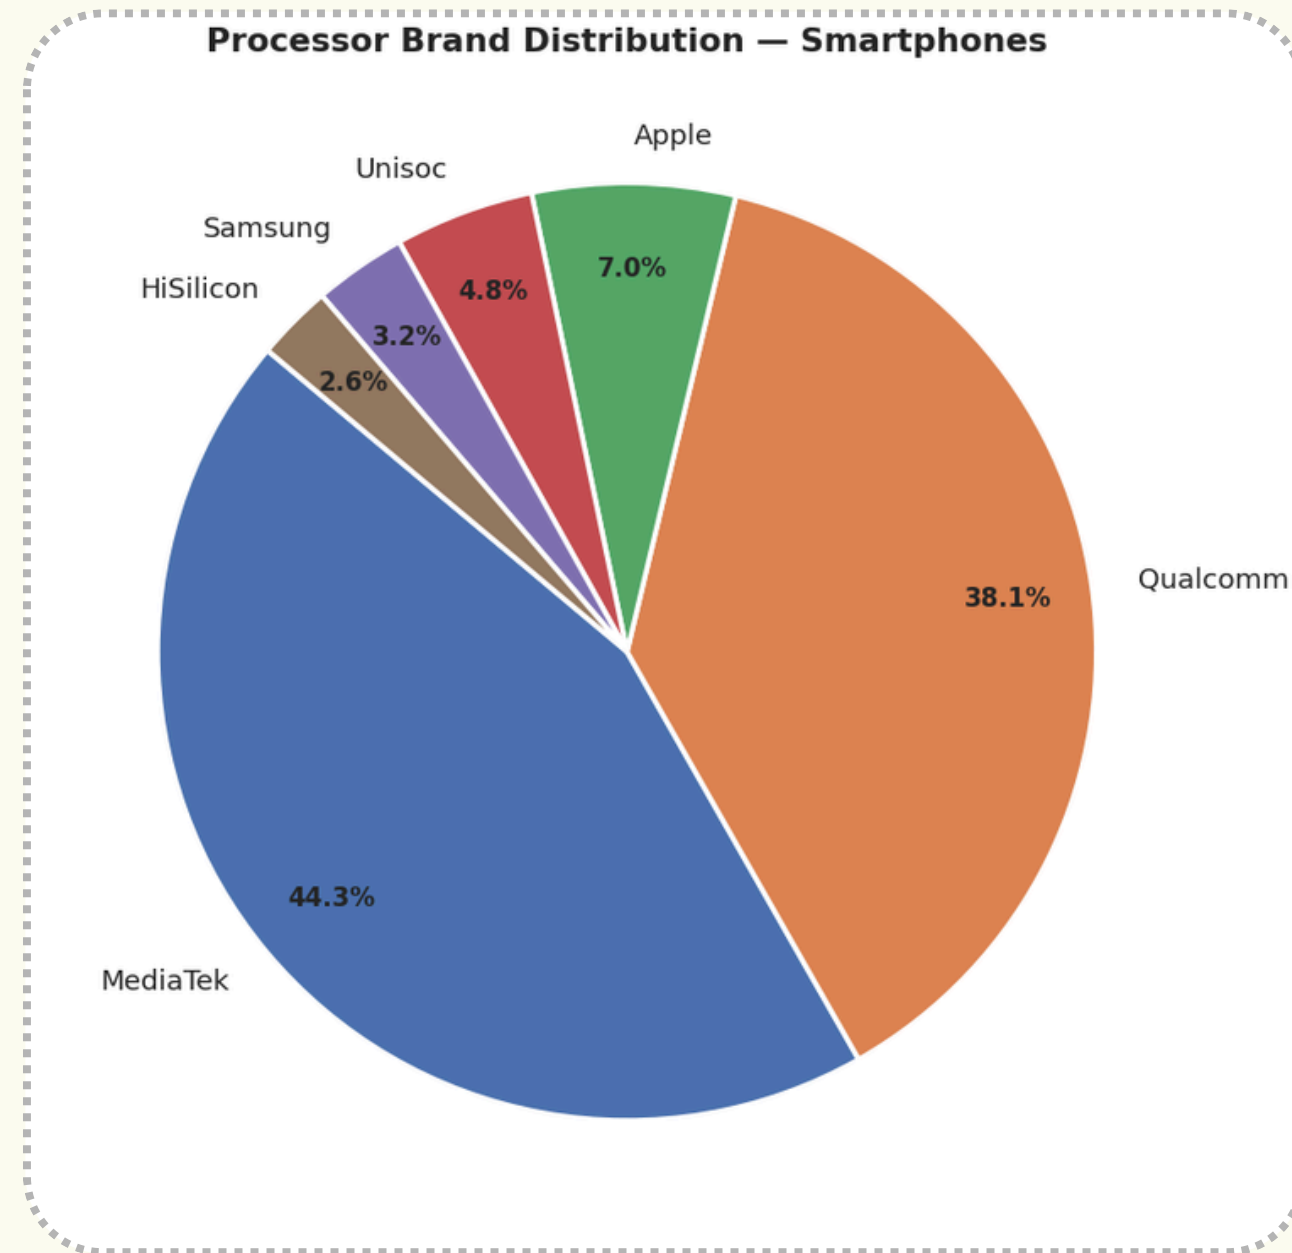

Price Distribution by Category

- Laptops: Expensive, high-value products.
- Smartphones & Tablets: Cheap and competitive (mostly under 100K ₹).
- The Trend: Lots of budget options, but only a few "luxury" choices.

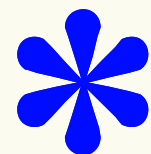

Processor Brand Distribution

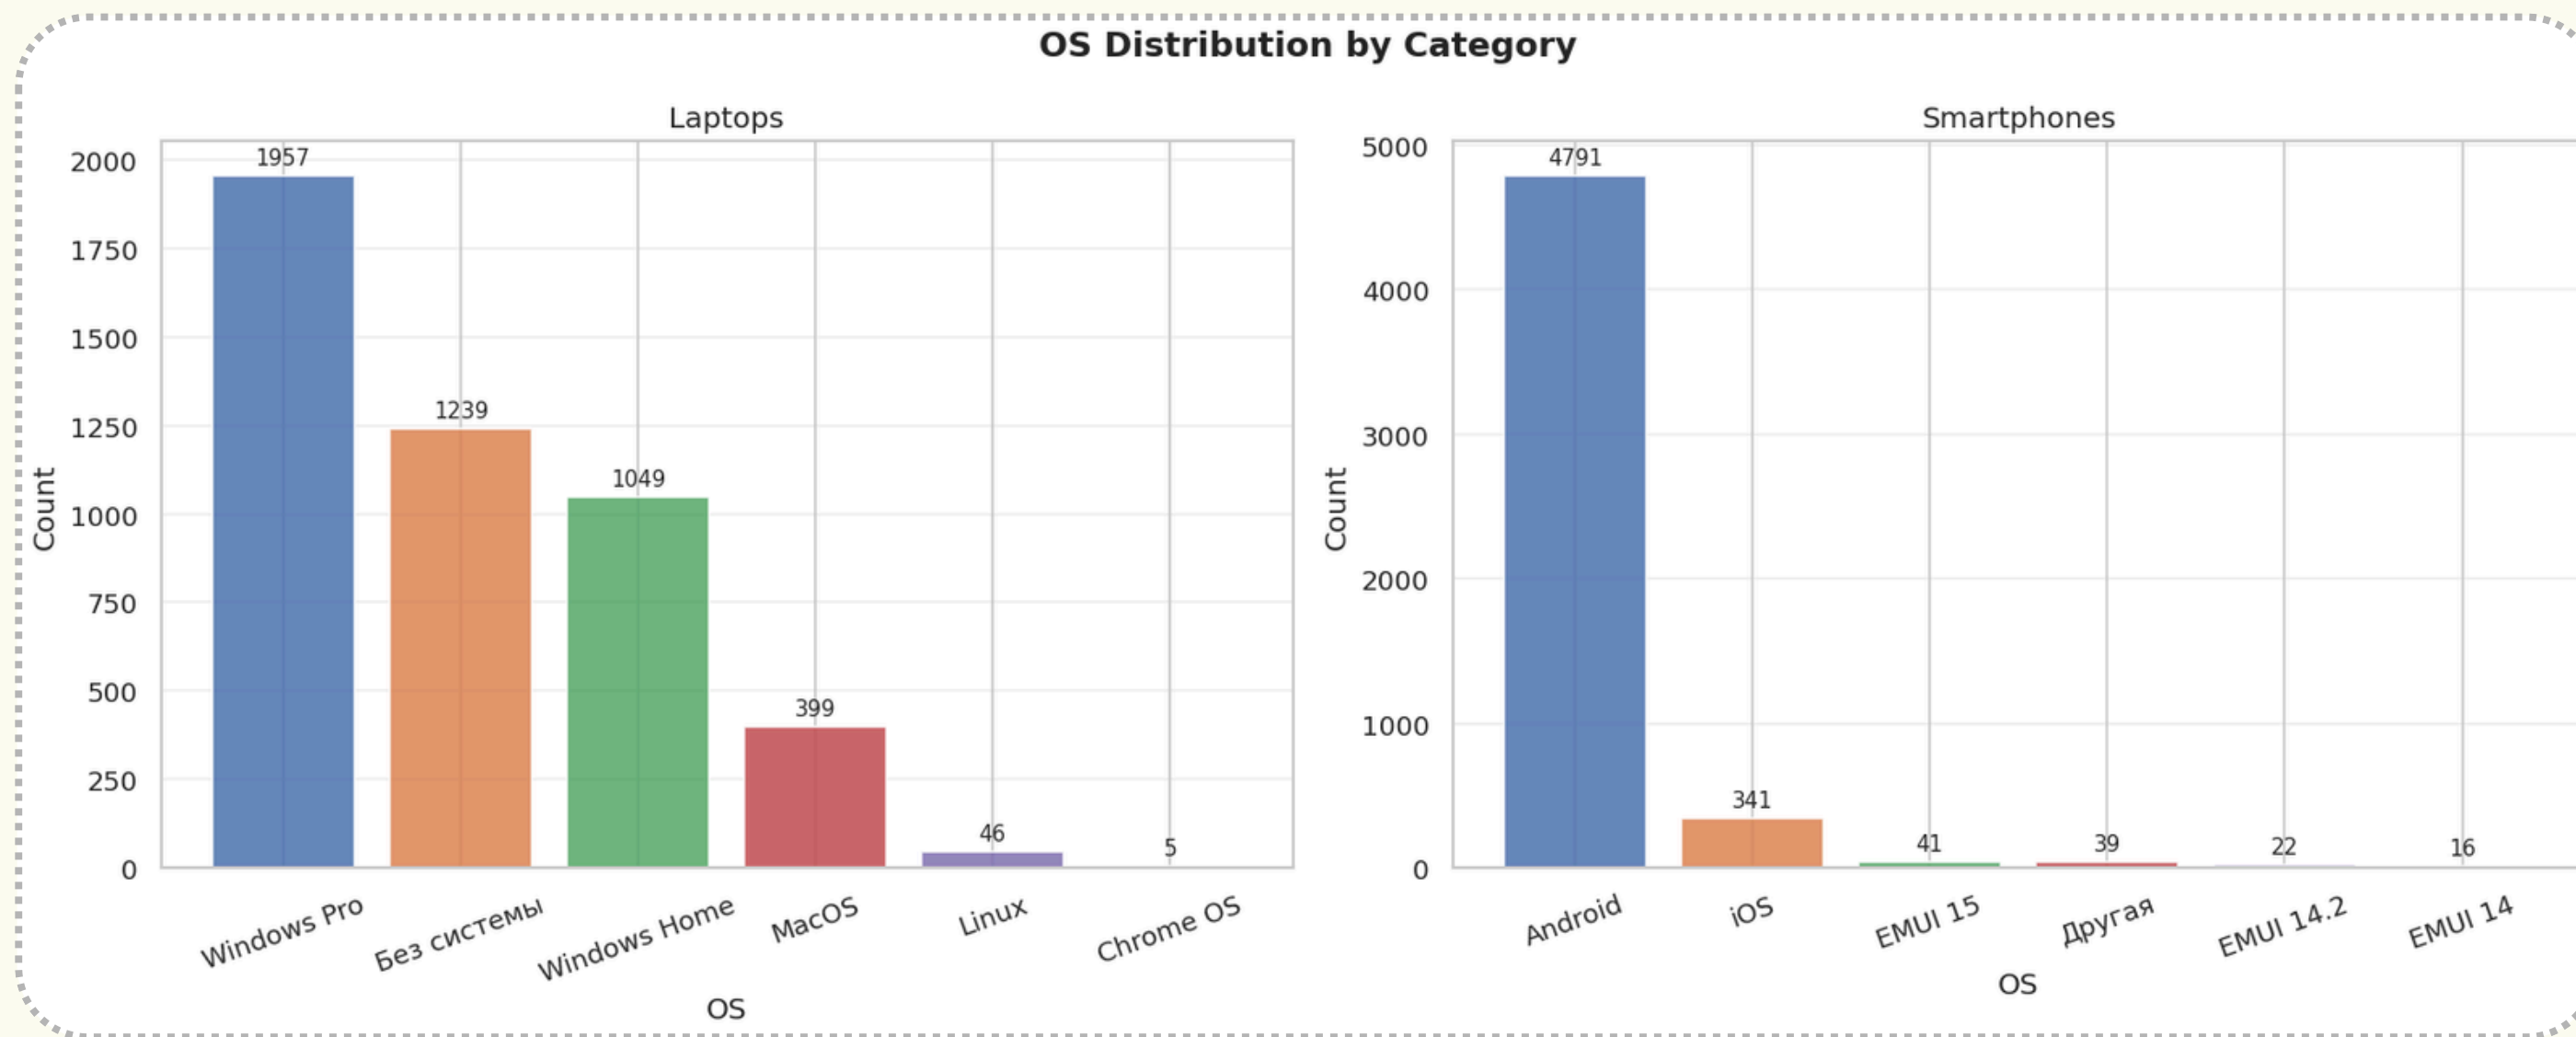

- Two giants lead the way: MediaTek (44.3%) and Qualcomm (38.1%) control over 80% of the entire market.
- MediaTek is #1: It is the most popular choice, likely because it powers many affordable and mid-range phones.
- The Big Names: Apple and Samsung have smaller shares (7% and 3.2%), showing that they are more exclusive compared to the massive reach of MediaTek and Qualcomm.

OS Distribution by Category

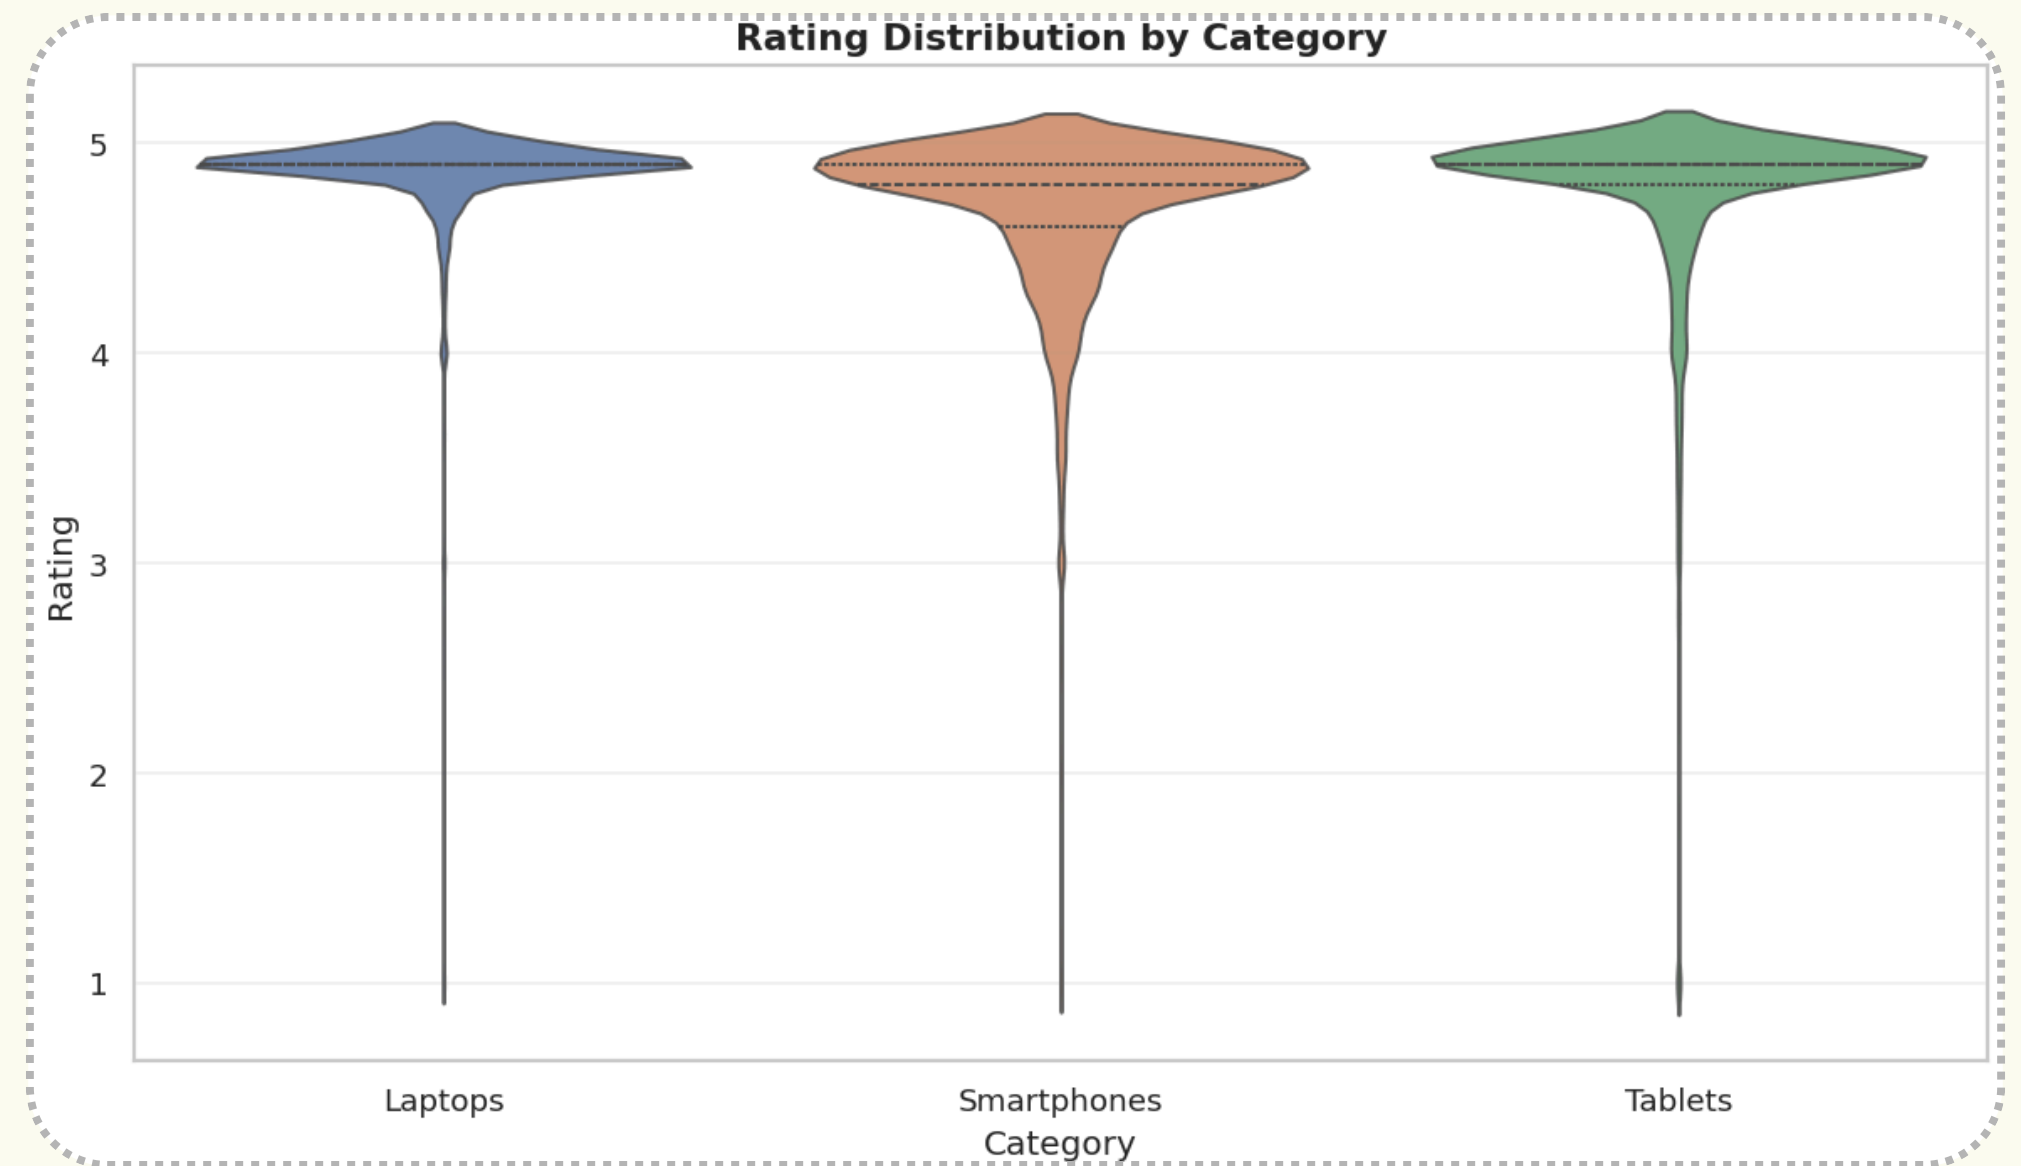

Windows is the top choice for laptops, while Android completely dominates the smartphone market. A significant number of users also prefer buying laptops without a pre-installed OS to save costs or choose their own software.

Rating Distribution by Category

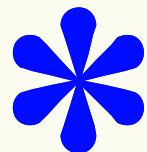

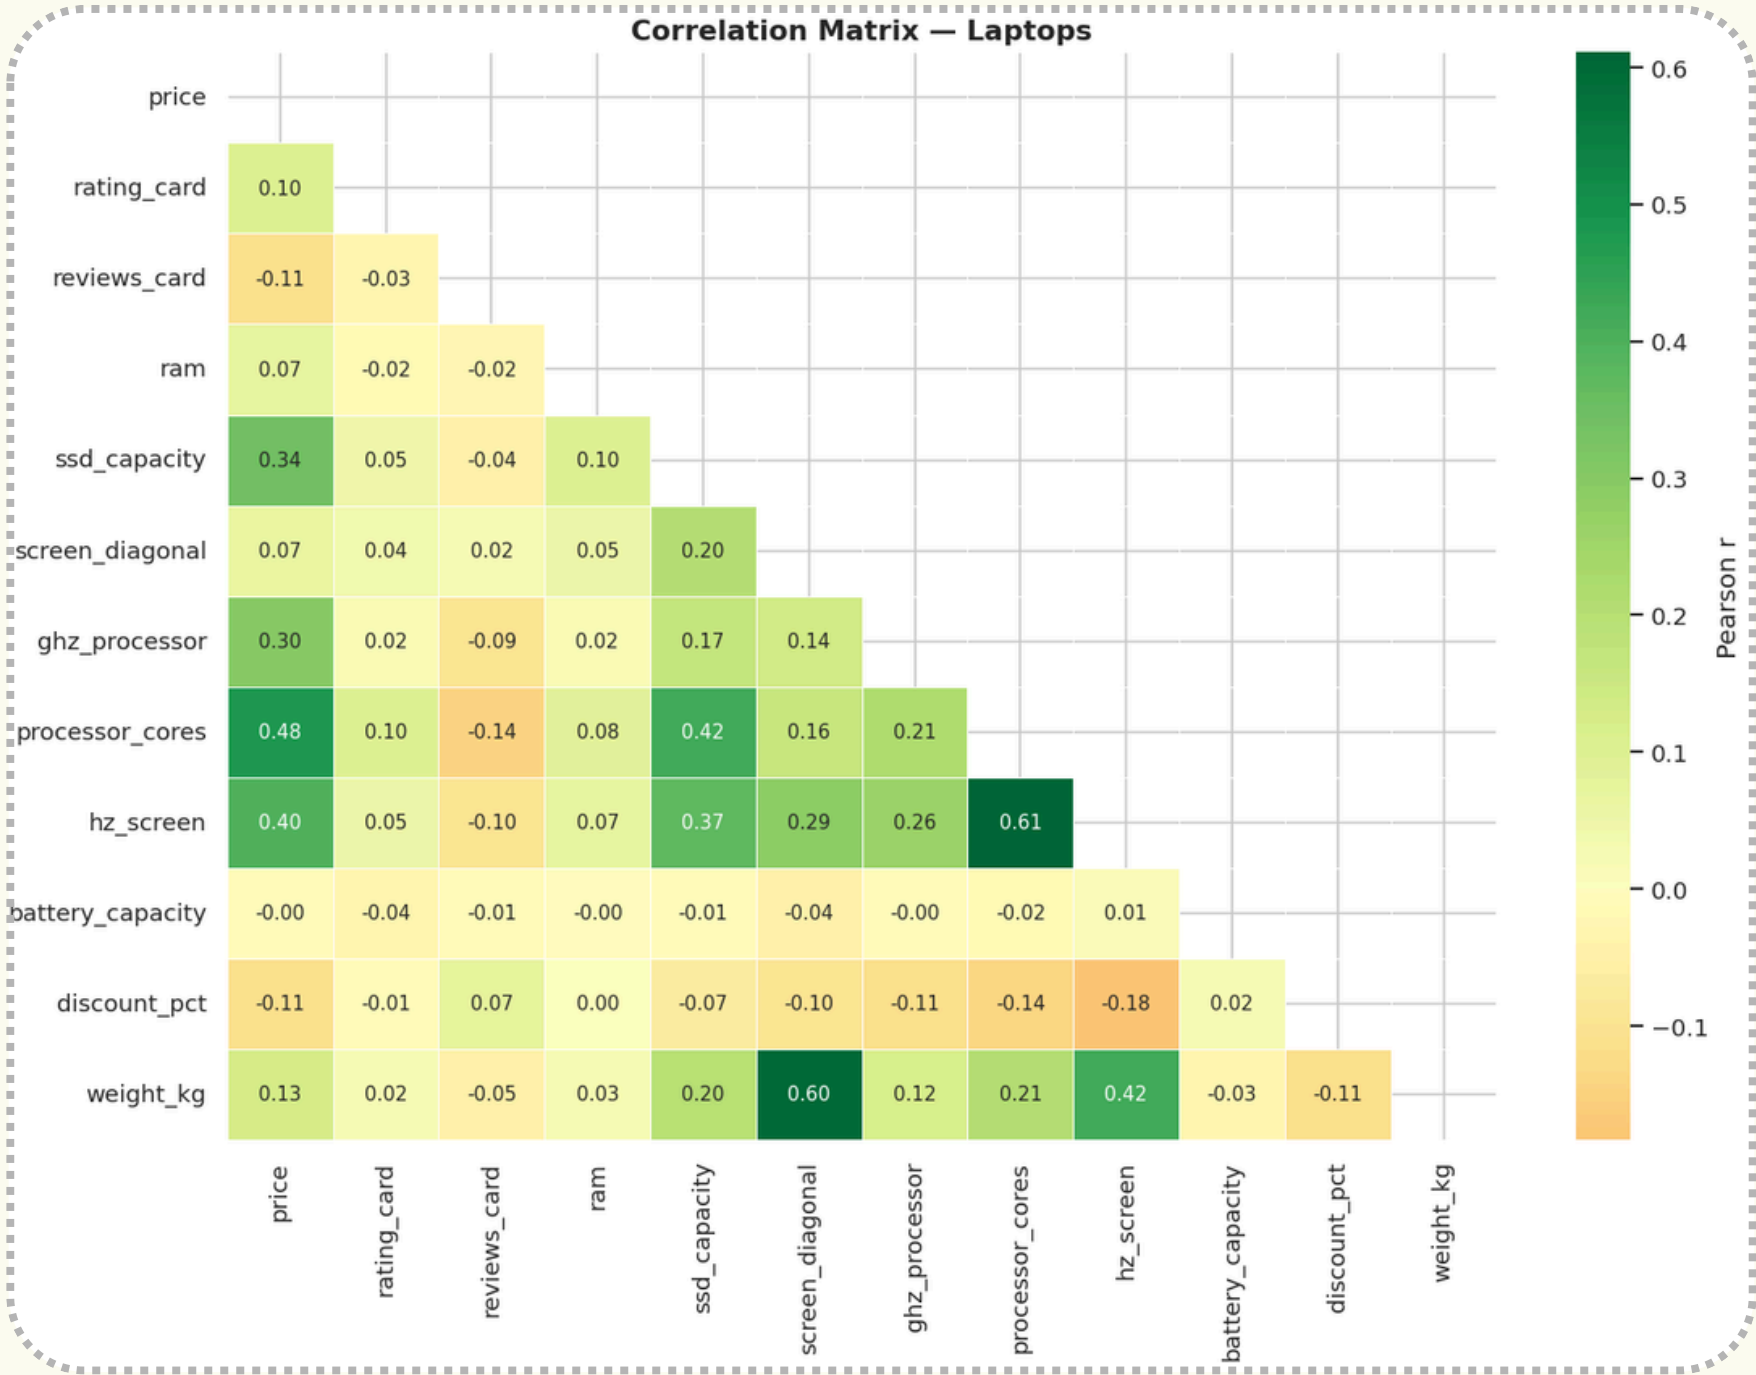

Customers are highly satisfied across all categories, with most ratings hitting the 4.8–5.0 range. Smartphones show slightly more varied feedback, while Laptops and Tablets enjoy the most consistent positive reviews.

Correlation Matrix for Laptops

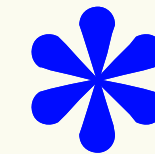

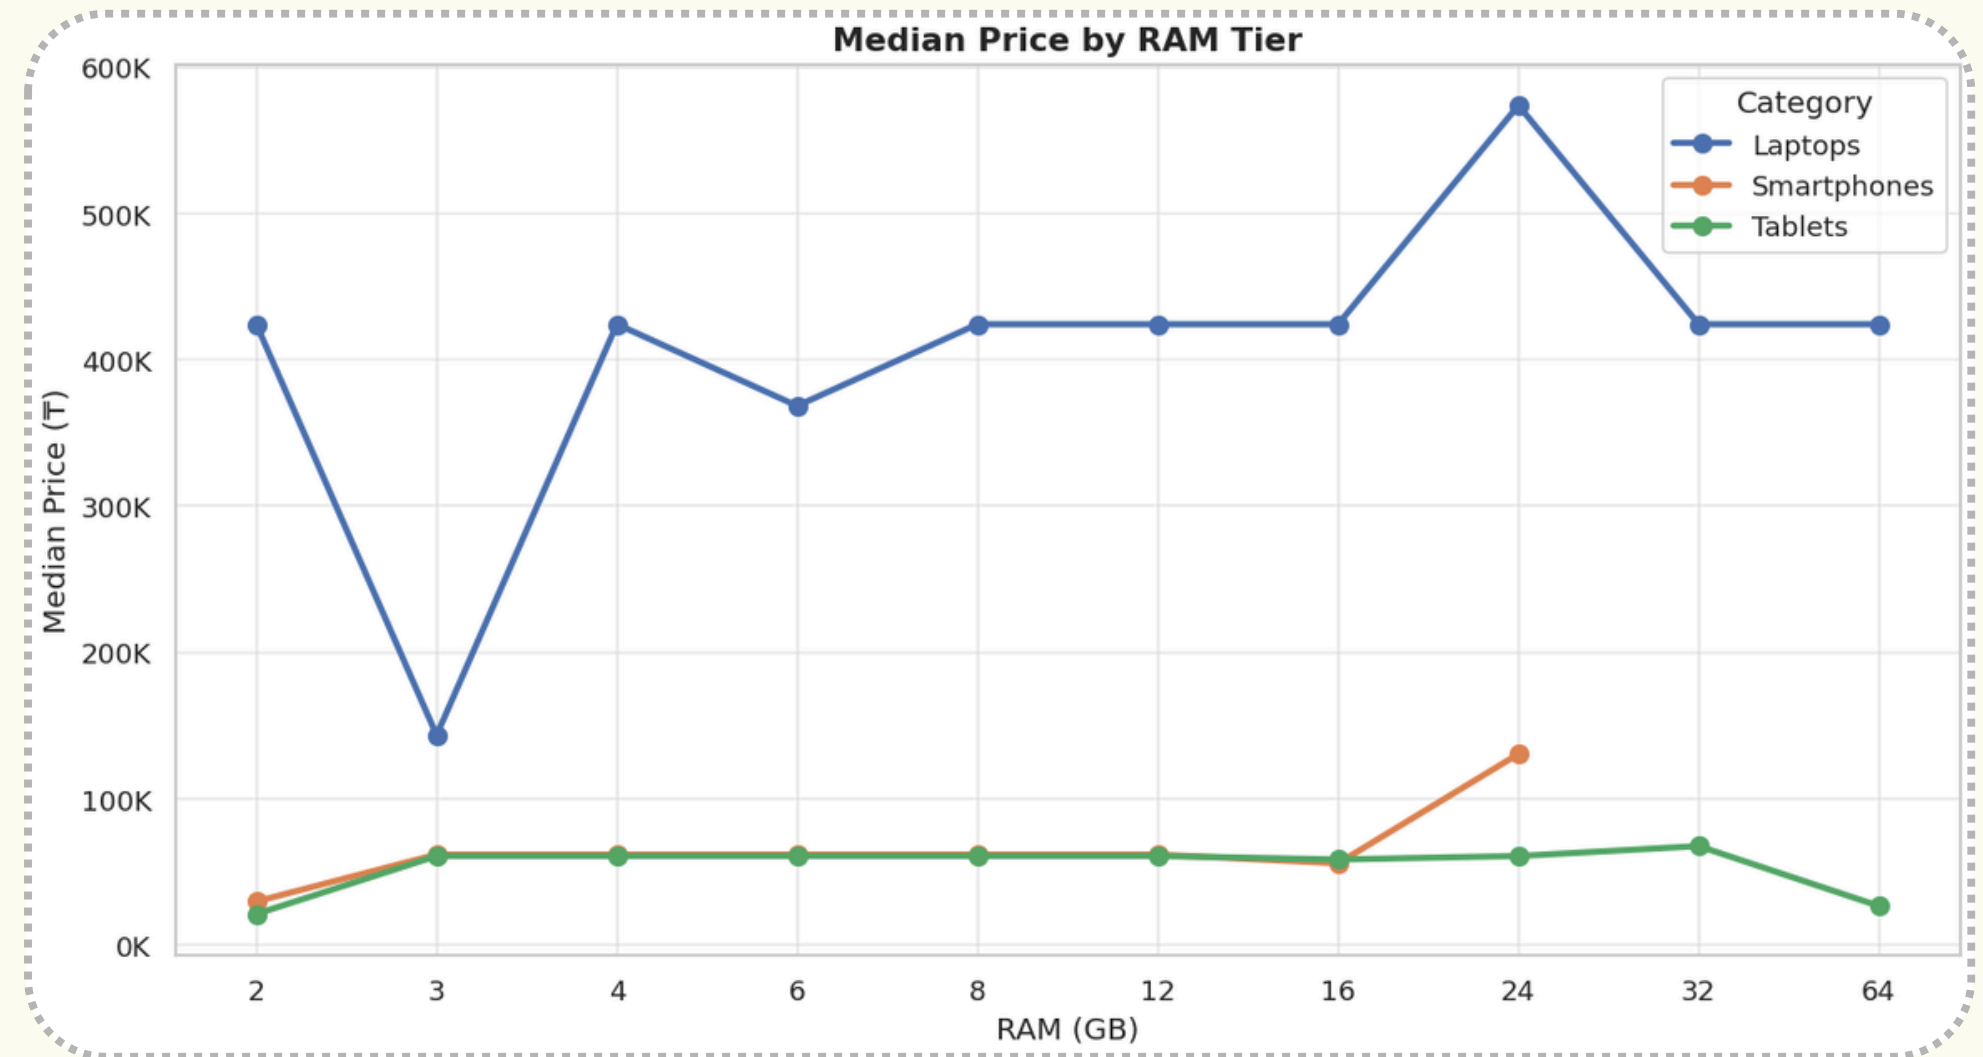

The data shows that Processor Cores and Screen Quality are the biggest factors affecting price. Interestingly, customer ratings are independent of the price, proving that expensive models don't always guarantee higher satisfaction

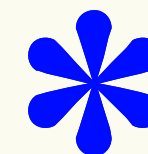

Median Price by RAM Tier

For Laptops and Smartphones, more RAM usually means a much higher price, especially at the 24GB level. Tablets, however, stay at a low and steady price no matter how much memory they have

Key findings

- Premium vs. Mass: Apple/Kirin for luxury, MediaTek/Qualcomm for everyone else.
- Main Products: Most people buy gadgets around 60K ₺, except for laptops which average 424K ₺.
- Value for Money: More "Power" (cores/RAM) costs more, but expensive items aren't always rated higher by users.
- Consistency: Overall, Ozon customers are very happy with their electronics, especially laptops and tablets.
